

**In the Specification**

Please replace paragraph beginning at page 17, line 5, with the following amended paragraph, which is marked to show the changes being made:

4.     Performance Module:     This module is a data analysis engine that generates score card reports of the performance of each participating Partner as compared to the minimum required performance level for each key performance indicator. Users ~~can also~~ can also drill down through the data to determine the root cause of any key performance indicator deviations against the required performance level. Examples of key performance indicators are: (a) on-time by location (versus appointment), (b) power dwell time by ship location and, (c) trailer dwell times (turns) by drop location.
